

## Thiruvananthapuram International Airport

### Press Note

#### E-Gate system at TIAL

Thiruvananthapuram, May 26: The new advanced e-gate system is ready to facilitate the journey of passengers from Thiruvananthapuram International Airport.

After checking in, passengers can enter the Security Holding Area (SHA) by scanning their boarding pass at the e-gates.

Six e-gates with QR code scanners have been installed in the pre-security hold area of the airport's domestic and international terminals. Earlier, the officials directly check the boarding pass and admit the passengers was the method.

With the introduction of e-Gate, passengers will be able to speed up the check-in process and avoid long queues during peak hours.

E-gates will help airlines easily locate passengers within the terminal and improve airport security.

The initiative is in line with Thiruvananthapuram International Airport's aims to develop a technologically advanced ecosystem that will offer a seamless, consistent and paperless service experience.
